Summary

I am a Computer Science student pursuing B.Tech at SGGSIET, Nanded with a Diploma in Computer Engineering. Strong foundation in Python, Java, and backend development with hands-on experience in building AI-driven systems including LLM-based applications, and web-based solutions. Passionate about designing scalable backend systems and applying AI/ML techniques to solve real-world problems, with continuous focus on Data Structures, Algorithms.

Education

Shri Guru Gobind Singhji Institute of Engineering and Technology <i>B.Tech in Computer Science and Engineering (9.5 CGPA)</i>	Sept. 2025 - Expected 2028 <i>Nanded, India</i>
Government Polytechnic Amravati <i>Diploma in Computer Engineering (94.53%)</i>	Sept. 2022 - June 2025 <i>Amravati, India</i>

Technical Skills

Languages: Python, Java, SQL
Backend & Databases: FastAPI, REST APIs, PostgreSQL, FAISS
AI/ML: RAG, LLM Applications, CNN, OpenCV
Core CS: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, DBMS
Tools: Git, GitHub, VS Code, Ollama

Projects

Pharma-AI (Digital Pharmacy Assistant) | *Python, FastAPI, SQLAlchemy, PostgreSQL, FAISS, Ollama Phi-3, Gemini API, Twilio*

- Built an AI-powered digital pharmacy assistant using FastAPI with asynchronous REST APIs, Pydantic models, SQLAlchemy, and PostgreSQL for medicine management and chatbot services.
- Implemented a Retrieval-Augmented Generation (RAG) pipeline using FAISS and Ollama Phi-3 for semantic medicine search, and integrated the Gemini API for prescription text extraction and Twilio for WhatsApp medicine reminders.

Bank Customer Churn Prediction System | *Python, Scikit-learn, Pandas, NumPy* | [GitHub](#)

- Built an end-to-end machine learning pipeline including data preprocessing, feature engineering, model training, and evaluation for customer churn prediction.
- Improved recall using threshold tuning and class-balancing techniques to enhance churn detection performance.

EcoCrop AI (Plant Disease Detection) | *Python, CNN, OpenCV, NumPy* | [GitHub](#)

- Developed a CNN-based plant disease classification system achieving over 85% accuracy using image preprocessing and data augmentation techniques.
- Integrated crop disease recommendations with Agmarknet-based market insights to support informed agricultural decision-making.

Experience

MDB Electrosoft Pvt Ltd <i>IoT Intern</i>	June 2024 – July 2024 <i>Amravati, India</i>
---	--

- Developed a Smart Street Light Automation System using PIR sensors and LDRs to enable motion-based brightness control and energy-efficient lighting.
- Integrated and tested sensor modules, optimized light detection logic, and assisted in the deployment of the automated lighting system.

Extracurricular

- Participated in HackFusion 3.0, where I developed an AI-powered digital pharmacy assistant featuring prescription scanning, semantic medicine search, and a conversational chatbot.
- Contributed to the Training & Placement Cell by supporting HR activities, student coordination, communication, and recruitment initiatives.
